PROFESSIONAL SUMMARY

Motivated Information Technology graduate with a strong foundation in software development, web technologies, database management, and machine learning concepts. Seeking an application for Software, Data, and AI-related roles to apply technical skills and hands-on experience in solving real-world problems.

Web & Design	AI & Data Science	Databases & Tools	Soft Skills
HTML CSS JavaScript TypeScript PHP User Interface Design User Experience Principles	Python Machine Learning Neural Networks Transformer Architectures EDA & Data Analysis Pandas / NumPy Scikit-learn	Relational Databases MySQL Supabase PostgreSQL Data Organization AWS (Server Mgmt, Deployment) GitHub / Vercel	Problem-solving Collaboration Time Management Data Organization

PROJECTS

Manila Sacramento Friendship Library Management System *Full Stack*

- Built a full-stack library management system that streamlined operations and improved user experience.
- Implemented a personalized book recommender system based on user reading history.
- Developed role-based access control to secure permissions for staff and users.
- Built the backend with PHP and MySQL, deployed on Vercel for optimized performance.

Machine Learning & Data Science Projects

- Developed multiple academic and personal machine learning projects using Python, Google Colab, Pandas, NumPy, Scikit-learn, and SQL for classification, prediction, and data analysis tasks.
- Performed end-to-end machine learning workflows including data cleaning, preprocessing, exploratory data analysis (EDA), feature engineering, model training, evaluation, and visualization.
- Documented and maintained projects using GitHub while continuously experimenting with different machine learning algorithms to solve real-world and personal problem scenarios.

Innovative Solution Technology Inventory System *Full Stack*

- Designed and developed a comprehensive inventory management system to streamline stock tracking, supplier/customer management, and transaction recording, enabling businesses to maintain accurate real-time inventory visibility.
- Implemented Weighted Average Costing (WAC) calculation for stock valuation, automatically recalculating average costs during stock-in transactions to ensure accurate inventory valuation and cost tracking.
- Developed complete stock movement tracking system with Stock In and Stock Out modules, featuring automatic quantity updates, supplier/customer association, and comprehensive transaction history with advanced filtering by date range, item, and client.
- Utilized Next.js 16 App Router, Python, TypeScript, Supabase PostgreSQL, and shadcn/ui component library to build a responsive, type-safe application with real-time data synchronization and optimized performance.

EDUCATION

Jose Rizal University

Bachelor of Science in Information Technology

2022 – Present

CERTIFICATIONS

- Database Certification (CERTIPORT) — May 2024
- AI Singapore – AI for Good Workshop, Supported by Meta — May 2025
- Future Ready Graduates: Building Soft Skills for Career Success — 2025
